

12V electric multi-point locking system

Article No.: AC3100

PYLOCX® Electric multi-point locking system 12V

Properties

- Certified according to EN 14846
- Forend in matt stainless steel, rounded
- 9 mm split nut
- Triple automatic latch deadbolt in locking position with 20 mm latch projection
- Integrated control electronics (12 – 24 V DC)
- Various backsets available on request
- Matching lever handle sets available on request

Functional description

The EK lock for single-leaf doors has an automatic locking mechanism. The inside and outside lever handle is engaged electrically, i.e. access can be controlled electrically. The signal required for this is sent via PYKEY® and the control module unit. In de-energised mode, the PYKEY® supplies the energy for opening.
