

HSL double bit deadbolt/slam lock with additional handle strike plate (with interchangeable mechanism)

Article No.: HSL 106

Bolt lock with single-turn bolt throw. The standard version of the lock has a lever handle and, in the single-sided locking version, a mechanical external visual indicator on the key-operated side.

Properties

- Push-button function for administrative doors
- Simple operation with HSL double bit key (1-turn)
- Keyed to different without a master key

Functional description

The HSL double bit key is inserted into the lock.

The deadbolt is locked with the key by turning it once (180°).

The door can be opened by pressing the handle.

The door is closed.

The deadbolt is locked with the key by turning it once (180°).

The door is completely locked and the handle is locked against insertion.

Changing the keyed lock

The lock can be changed to a different keyed lock when unlocked (deadbolt locked). This requires a key for the current lock and a key for the new lock.

The HSL 106 type is designed for administrative and passage doors. The deadbolt is locked and unlocked with one turn of the key (180° turn). The handle is locked when the deadbolt is locked. The key can be removed when the lock is locked and unlocked.

Places of use

- Passage door
- Technical room
- Sanitary room
- Service door
