PYKEY - Z

Article No.: PL 1234

The PYKEY-Z is the digital key for the PYLOCX-Z product family. It combines digital access control with the familiar operation of a traditional key—simply insert, turn, and open.

Functional description

Depending on the application, the PYKEY-Z can be used with various code options, ranging from one-time codes to fixed codes and “Access on Key.” Access permissions can be managed conveniently and clearly via the PYLOCX Suite. This allows for flexible adaptation to different access requirements and easy control of permissions. Within the product family, the PYKEY-Z can be used with, among other things, half cylinders, knob cylinders, padlocks, and quarter turn bolts.
