HSL key guide

Article No.: RB 100

HSL key guides are used on one or both sides, depending on the lock function. The guide is bolted directly to the lock through a circular opening in the door leaf. The result is a precise functional unit and a perfectly protected locking mechanism.

Properties

- Flexible length available in 5 mm increments
- For key profiles P40 and P41
- Also available for fire doors in T30 and T90

Functional description

HSL key guides are available in standard lengths from 16 mm to 56 mm. With a central lock position, door thicknesses of up to 130 mm can be achieved as standard.
Special lengths even allow door thicknesses of up to 192 mm.
The groove insert and profile cover are individually mounted according to the locking system.
Fastening is carried out with tamper-proof security screws made of stainless steel.

Technical specifications

Material	stainless steel
Surface	dull
