

## HSL lifthandle for Basquill-/Triebelocks

Article No.: RB 700

---

Ergonomically designed lifthandle with sturdy quadruple screw connection. Rounded edges for safe operation.

### Properties

- Robust and ergonomically shaped version made of stainless steel investment casting
- Integrated overspeeding protection

### Functional description

The investment casting lifthandle made of stainless steel is designed for use with Basquill locks. A three-point locking system is realised in connector with a lock (e.g. HSL 301 and HSL 302). The bezel of the ergonomically shaped lifthandle is bolted directly to the lock. The square pin engages in the lock follower and an integrated over-tightening protection prevents damage to the lock.
