HSL passenger knob

Article No.: RB 710

On locks with privacy lock, the latch can be inserted on the non-striking side using the knob.

Properties

- Robust version made of light metal
- Integrated over-rotation protection
- Suicidal-proof conical design

Functional description

The light metal knob is designed for use with profile half cylinders with a shaft. In conjunction with a deadbolt lock (e.g. HSL 102 and HSL 302), a secure passenger locking function is achieved.
The bezel of the rotary knob is bolted to the door. The rotary part is then securely bolted to the bezel with two threaded studs.
An integrated anti-rotation device prevents damage to the lock.
The conical shape of the knob makes it difficult to fasten objects to it.
