

## HSL passenger knob

Article No.: RB 710

---

For locks with a privacy lock, the latch can be inserted on the compartment side using the knob.

### Properties

- Sturdy version made of light metal
- Integrated over-twist protection
- Suicide-resistant conical design

### Functional description

The light metal knob is designed for use with profile half cylinders with shaft. A secure occupant locking function is realised in conjunction with a hold-open lock (e.g. HSL 102 and HSL 302). The bezel of the knob is bolted to the door. The rotary part is then securely bolted to the bezel with two threaded studs. An integrated over-turn protection prevents damage to the lock. The conical shape of the knob makes it difficult to fasten objects underneath.
