HSL screw-on strike plate for HSL C17X - adjustable

Article No.: SB 220

The screw-on strike plate for the HSL C175 and C171 locks is placed on the strike pocket of the frame.

Properties

- Designed to fit perfectly with HSL C175 and C171 locks
- Infinitely adjustable angle
- Includes buffer to protect against damage during improper handling

Functional description

The screw-on strike plate for the HSL C175 and C171 locks is mounted above the deadbolt pocket of the frame to ensure that the deadbolt enters the locking position smoothly. With a continuously adjustable adjustment angle, the width of the deadbolt pocket can be precisely adapted to the dimensions of the deadbolt. Two buffers are provided to ensure that no damage occurs due to accidental slamming when the door is open and the deadbolt is locked. The fitting can be removed to ensure emergency access in the event of a lock failure.
