

HSL screw-on striking plate for HSL C17X - adjustable

Article No.: SB 220

The screw-on striker plate for the HSL C175 and C171 lock is placed on the deadbolt pocket of the frame.

Properties

- Designed to fit HSL C175 and C171 locks
- Infinitely adjustable angle
- Includes buffer to protect against damage from improper handling

Functional description

The screw-on striker plate for the HSL C175 and C171 lock is mounted over the deadbolt pocket of the frame to ensure smooth entry of the deadbolt into the locking position. With an infinitely adjustable adjustment angle, the width of the deadbolt pocket can be precisely adapted to the dimensions of the deadbolt. Two buffers are provided to ensure that no damage is caused by accidental slamming when the door is open and the deadbolt is locked forward. The fitting can be dismantled to ensure emergency access in the event of a lock failure.
